

10 tips to get in control of your child's screen time

Set a good example with your own device use

Have discussions about the risks that they may face based on their online activities

Put in place a family agreement and agree an appropriate length of time they can use their device

Help them build critical thinking to understand that some features on platforms are design to keep you watching or playing

Encourage them to **switch off** auto-play on platform to remove the temptation to binge on programmes

Use **tech tools and parental control** to manage the time they spend online and the apps they use
Get the whole family to unplug and create 'screen free' zones at home

Together find apps, site and games that will help children explore their passions and make screen time active

For younger children find ways to combine touch screen use with creative and active play

Encourage children to **self-regulate** the time they spend online and the activity they do to ensure they are having a positive impact on their wellbeing

10 tips to get in control with your child's screen time

Safety by numbers

Technology changes even faster than our children do, so it's important to keep up with the most appropriate safety settings. Getting the balance right between giving children the freedom to learn, socialise and play, and ensuring that they are kept safe can be tricky.

Here are tips for each age group:

Toddlers

You can activate safety features starting with the settings on your broadband, so that a password must be entered before content is shown.

Toddler profiles on shared devices can feature bookmarks and apps. Try the YouTube Kids app, which ensures that your toddler will not accidentally discover videos with adult themes, and a child-friendly search engine such as Google's Kiddle or its Microsoft equivalent, WackySafe.

In a pinch, enable airplane mode so they play offline.

Tweens

Many music and video sharing apps have a 13+ age restriction, but that won't stop today's hyper-connected tweens from requesting them.

For parents who allow their tweens onto social media, safety stipulations should include ensuring accounts are private. Time limits should be set on the device itself, and also on individual apps and games.

Most important: keep talking through issues tweens encounter, from images of airbrushed perfection to online bullying.

Primary years

Online safety at this age is about who children are contacting as well as what they are seeing.

Apps like Google's FamilyLink or Qustodio (free on up to five devices) give you complete visibility on everything your child views and whom they contact.

Children are likely to request access to social networks and games with chat functions. Check the PEGI rating (like a film rating for games) as well as the recommended age range before letting them sign up. Adding a parental pin and locking down the chat settings so they can only chat with known friends is vital too, as well as disabling in-app purchases to prevent bill shock.

Teens

Discussions around digital wellbeing, screen breaks and the effects of social media will be relevant in the teen years.

Personal devices have become conduits for learning as well as play for all of us, but it is vital to know when to switch off. Individual time limits on apps can help, as can the stipulation that social media accounts can be private, not open.

While apps like Forest can encourage downtime and help teens focus on things like school revision, make sure Snap Maps is operating in ghost mode, so they aren't sharing their location.

Digital resilience

Digital resilience is teaching our children the knowledge, skills and strategies to manage their online experience safely and responsibly while protecting their digital identity and mitigate risks to stay safe from harm online . We teach online safety in our computing curriculum and media literacy and digital resilience in our PSHE curriculum. We are giving the children the skills they need to know how to keep themselves safe and to know how to report inappropriate content and comments.

What is cyberbullying?

While the emotional aspects of bullying continue to be devastating, the internet and social media have changed the way children experience bullying. Cyberbullying, simply put is bullying that happens online through social, gaming or instant messaging platforms
